

Sebastian Kwiatkowski

Specialist in fetal-maternal medicine

Specialist in Obstetrics-Gynecology

Member of Board Polish Society of Gynecologists and Obstetricians

Member of Board EBCOG

Polish delegate to EAPM

Vice-president of Perinatology Section Polish Society of Gynecologists and Obstetricians

I focus my research interests on obstetrics and maternal-fetal medicine. I am particularly interested and researching the use of angiogenesis markers in pathologies of placental origin. It was the subject of my habilitation thesis and further research. In addition, my scientific interests are related to the broadly understood prenatal diagnosis, in particular the analysis of prediction algorithms of the first and second trimester in predicting and assessing perinatal outcomes as well as the analysis and modification of available diagnostic methods in the course of high-risk pregnancies

I am the author of over 100 articles and scientific reports. I am the main author and coordinator of the recommendations of the Polish Society of Gynecologists and Obstetricians on FGR (fetal growth restriction). I participated in the preparation of the recommendations of the Polish Society of Gynecologists and Obstetricians on ultrasonography, including the updating of preeclampsia screening. One of my papers was cited in the ISUOG FGR Guidelines.
